

## LIST OF REQUIRED INFORMATION FOR FMS SUBMITTALS

“FMS” stands for “Flood Management Strategies”, or a flood-risk-reducing activity that does not easily fit the definition of an FME or an FMP. FMSs may not always affect the flooding in an area as much as the awareness of flooding in an area, so the information requirements are different than FMEs and FMPs.

To support an **FMS submittal**, the following information is **required**:

- A GIS-based file of the area that would benefit from the FMS in .shp format. A Google Earth .kmz file is also acceptable.
- A brief (not to exceed one page) description of the improvement and how the improvement would be beneficial to the community
- A cost estimate of the proposed improvement
- An identified local sponsor

To support an **FMS submittal**, the following information is **encouraged but not required**:

- Any known implementation issues (can be included in the one-page description).

If you have any questions regarding these submittal materials, please reach out to any of the following:

- [Region15@halff.com](mailto:Region15@halff.com) via email
- Deputy Project Manager: Anne Whitko
